Attitudes towards pelvic examination and chaperones: a questionnaire survey of patients and providers

Reviewed by Kate Weaver, MB ChB, MFFP

Summary

This helpful paper looks directly at women’s feelings about pelvic examination and their attitude towards chaperones being present during examination. It also reports on doctors’ contrasting opinions in this area.

Smoking, body mass and hot flashes in midlife women.

 plc

This study was designed in response to a number of the recommendations that were made by the National Institute for Clinical Excellence (NICE) in their report on a traumatic experience in midlife women. The authors, from Leeds, point out the important recommendation of the Royal College of Obstetricians and Gynaecologists (RCOG) that accurate, impartial, printed information should be used to support verbal advice to anyone contemplating a legal abortion (RCOG Evidence-Based Guidelines, No 7, 2000).

This study examined 44 leaflets that included advice regarding medical and/or surgical methods.

The authors, from Leeds, point out the important recommendation of the Royal College of Obstetricians and Gynaecologists (RCOG) that accurate, impartial, printed information should be used to support verbal advice to anyone contemplating a legal abortion (RCOG Evidence-Based Guidelines, No 7, 2000).
