The study was limited by its small sample size; consequently, its power to detect satisfaction and comfort is also limited. Due to selection bias it is not clear if similar study results could be replicated in the general population. In addition, recruitment of women from family planning clinic populations may bias results towards those who are already willing to use a contraceptive method. However, the favourable results point toward the acceptance of this product, especially among couples in stable partnerships that value the benefits of female barrier contraception.

A contraceptive effectiveness study evaluating use of the SILCS diaphragm with contraceptive gel is currently underway in the USA with the results expected in 2010. Additional research evaluating service delivery options for a single-size cervical barrier device would also help clarify the feasibility of adding the SILCS diaphragm to reproductive health programmes worldwide.

Acknowledgements

PATH would like to acknowledge the effort and commitment of their research partners in South Africa and Thailand, the women and men who willingly shared their experiences, and the collaborative research partnership with CONRAD, which has designed development and evaluation of the SILCS diaphragm since 1994.

Statements on funding and competing interests

Funding

This study was supported by CONRAD, Eastern Virginia Medical School, Noraid USAID Cooperative Agreement #HRN-A-00-98-00020-0, and the Bill & Melinda Gates Foundation. The opinions expressed herein are those of the authors and do not necessarily reflect the views of USAID, CONRAD or the Bill & Melinda Gates Foundation.

Competing interests

PATH designed the SILCS diaphragm with funding from USAID through the CONRAD Program.

BOOK REVIEW

Readers of a certain age will remember the publication of the original Joy of Sex – a book ahead of its time in the 1970s. Highly graphical with clear explicit information, it was updated in the 1990s and it now has been fully revised, updated and refocussed to meet the needs of women and men in today’s contemporary world.

Alex Comfort, the doyen of sex, was committed to his work and his continued updating of his tome. Although we are now in the 21st century, myth, misinformation and guilt still remain low. This book does deliver what it says on the cover – it addresses the joys of sex, the pleasures of couples to enable couples to find out more about themselves, their desires and their needs. This is not a book about ‘basics’ but it does address the fundamental building blocks required for good sexual relationships – an understanding of reproductive anatomy and physiology, compatibility, love, fidelity, age and health. It addresses seduction, lovemaking, intercourse, non-intercourse sex, safer sex, sexual techniques, experimentation, the use of erotica, sex toys and brings in technology such as use of e-mail, text, phone sex and the Internet. Whilst The New Joy of Sex is written for couples to enable them to get more out of their sexual lovemaking, the text in parts is cleverly interspersed with ‘tips from him to her’ and vice versa, and the information contained in this book would be of value to anyone who reads it. Do I have any quibbles with this book? The information content is excellent, but in today’s contemporary world, where we all come in different shapes, size, age and colour – this book’s photographs and diagrams with their perfect (almost hairless, wrinkle-free) young, white women and men does not reflect this. The resource section is helpful but rather short and omits important organisations such as Cancerbackup and The Institute of Psychosexual Medicine.
