

Appendix 1: Inclusion criteria by review stage

Stage 1: Title screening

- Date range:** No restrictions
Study design: No restrictions
Analysis: No restrictions
Participants: No restrictions
Setting: Should *not* specify/imply setting other than US (retain if multiple)
Exposure: Should mention providers/access and/or one or more supply-side* abortion policies
Outcome: Should mention abortion rates and/or women's health outcomes

***Supply-side:** Pertains to facilities and/or providers (i.e., TRAP, ASC, radius). Include papers on funding cuts at this stage. Exclude if explicitly demand-side (i.e., parental consent, ultrasound, waiting periods), but retain if unclear or if multiple policies are mentioned. Mention of policy is more important than outcome at first stage screening.

Stage 2: Abstract screening

- Date range:** No restrictions
Study design: No restrictions
Analysis: No restrictions
Participants: Women (15-44) residing in any/all US states
Setting: United States
Exposure: Must mention providers/access and/or one or more supply-side abortion policies
Outcome: Must mention or allude to abortion rates and/or women's health outcomes
**When in doubt, opt to include for full text screen*

Stage 3: Full text screening

- Date range:** No restrictions
Study design: Original reports only (no reviews, policy statements, etc.)
Analysis: Quantitative (exclude if qualitative)
Participants: Women (15-44) residing in any/all US states
Setting: United States
Exposure: One or more supply-side abortion policies**
Outcome: Abortion rates and/or women's health outcomes

****Exclude if:** Policy/policies are not the primary exposure (exclude if covariates)
