

Supplementary Table 1: Crude and adjusted risk differences for medical abortion outcomes by group (n=1847)

	Pharmacies (n=910)		Clinics (n=937)		Crude Risk Difference (95% CI)	Adjusted Risk Difference* (95% CI)
	n	%	n	%		
Received additional treatment to complete the abortion	85	9.3%	119	12.7%	-1.6% (-7.4% - 4.1%)	-2.6% (-7.6% - 2.4%)
Felt confident the abortion was complete	736	82.0%	826	88.8%	-7.4% (-15.6% - 0.7%)	-6.9% (-15.4% - 1.6%)
Visited a health care professional for any other problems, outpatient or inpatient	29	3.2%	108	11.5%	-3.6% (-12.9% - 5.6%)	-4.3% (-15.1% - 6.6%)

*Adjusted for age, gravidity, previous abortion, and gestational age.
