Supplementary Figure 1. Numbers of women randomised and included in the psychosexual (PS) comparison

1228 randomised to initial therapy

1204 allocated for allocation

24 did not have allocation

2040 recruited for randomisation

20 did not accept to randomisation

2040 randomised

20 not randomised

2040 had adequate allocation

25 had inadequate allocation

1 allocation not done

203 allocated for immediate laparoscopy

19 allocated to punch biopsies & salvage recall

194 recruited and attended laparoscopy after PS questionnaires implemented

194 recruited and attended laparoscopy before PS questionnaires implemented

194 recruited and attended laparoscopy after PS questionnaires implemented

Number (%) who completed questionnaires

10. Baseline: 714 (77.7%) 714 (77.7%)

12. 2-months post-recruitment: 543 (72.3%) 543 (72.3%)

24. 6-months post-recruitment: 419 (61.4%) 419 (61.4%)

48. 24 months post-recruitment: 217 (32.3%) 217 (32.3%)

96. 36 months post-recruitment: 105 (17.9%) 105 (17.9%)

194 recruited and attended laparoscopy after PS questionnaires implemented

Number (%) who completed questionnaires

10. Baseline: 714 (77.7%) 714 (77.7%)

12. 2-months post-recruitment: 543 (72.3%) 543 (72.3%)

24. 6-months post-recruitment: 419 (61.4%) 419 (61.4%)

48. 24 months post-recruitment: 217 (32.3%) 217 (32.3%)

96. 36 months post-recruitment: 105 (17.9%) 105 (17.9%)

194 recruited and attended laparoscopy after PS questionnaires implemented

Number (%) who completed questionnaires

10. Baseline: 714 (77.7%) 714 (77.7%)

12. 2-months post-recruitment: 543 (72.3%) 543 (72.3%)

24. 6-months post-recruitment: 419 (61.4%) 419 (61.4%)

48. 24 months post-recruitment: 217 (32.3%) 217 (32.3%)

96. 36 months post-recruitment: 105 (17.9%) 105 (17.9%)
